IKM / IMM / IUM / IGM Series
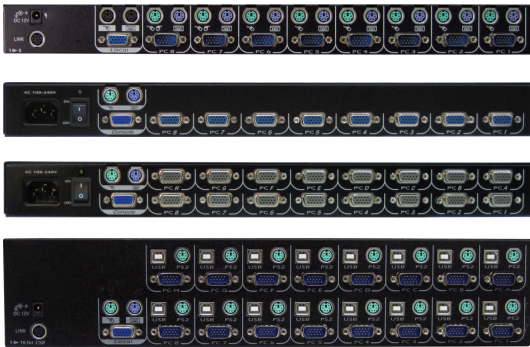

The combination of Integra console and Integra KVM Switch Module offers the latest and the most efficient way to control server rooms and multiple computers. Many models of Integra KVM Switch Modules are able to control from 8 to 136 servers via the Integra console or another set of console 100ft (30m) away. This is the ultimate tool for server management.

With a universal C-36 connector, any module can be slid into the back of the TFT LCD console drawer. The module is securely locked into the drawer as an integral part of the 4-in-1 system: keyboard, touch pad, monitor and KVM switch. Keyboard mapping enables you to operate a combination of PC, Mac and Sun servers.

■ Features ■

- Cascade configuration expands system capability
- Auto-scan automatically selects computers sequentially
- Assign computers with unique and meaningful names with 14 characters
- Identifies and selects computers by the names
- Programmable scan filters unused computers
- Assigns computers with unique and meaningful names
- Stores system settings and names entries to non-volatile memory
